

## Unit Specifications: Cased Hole Wireline – Conventional & Mast

## Equipment

Titanium's' E-Coil Tubing Units are fully integrated units that are mounted on Freightliner single steer, tri-axle drive chassis. These Units have applications for deep horizontal completions with a line capacity of 8000 meters.

Titanium's Cased Hole Wireline units are designed for reliability and meet all Standards for Highway vehicles.

All Units have the ability to work on Class I, II, or III wells and are equipped to intervene on wells up to 500F. All Units are equipped with Warrior Version 8.0 and have a Kerr Measuring system for accurate depth control.

## Wireline Capacity

8000Meters of High-Temp (500F) 7-1/32" Mono-Conductor Wireline

## BOP

Titanium's conventional wireline units have a variety of different BOP configurations depending on the task. BOP sizes range from 3-1/16"- 7" and have working pressure limits from 3K to 15K.
